

# VICTOR LOPEZ

ciberiori@gmail.com      jokernegro@linkedin

## Main Technologies.

Frontend-Backend.  
Angular. AngularJS . VueJS  
HTML5 .CSS3. JS-Typescript  
C# . PHP . JAVA . Python.  
Laravel.Springboot.Django.  
EntityFramework.NodeJS.  
REST-Soap Services.

## Devops Tools - Infraestructure

Git .SVN.Jenkins .  
Gitlab CI/CD .  
Bitbucket pipelines . Github  
Actions.AWS (S3). Docker.  
Kubernetes. IIS.Websphere.  
Weblogic.EJB.Linux.  
Windows Server.

## Soft-Skills and others

English-Advanced .  
French-Medium .  
Spanish-Native

Brazilian jiu-jitsu chess and  
play videogames.

*Hello, my name is Victor. I'm a Full Stack Developer with extensive experience in agile environments. This means I am involved in every stage of the development process, from writing the first line of code to deploying the application in production.*

## EXPERIENCE

### **Bci seguros - Technical Lead and Full Stack Programmer. (3 years 5 months)**

I am currently working as a Technical Lead at BCI Seguros. My role involves improving the user experience through programming and assisting developers with issues related to new or existing features. We work in an agile environment, primarily using Angular and Vue for the frontend, and C# (ASP.NET Core) for the backend. We use Git and Jenkins for deployment, and Oracle and SQL Server for database management.

I have led multiple technical teams to achieve specific deadlines. In addition to this, I have worked as a programmer, developing new features such as integrating new services (API - SOAP) and resolving issues reported by end users or business stakeholders, .

### **AFP Cuprum - Full Stack Programmer (2 years 7 months)**

I worked as a Full Stack Programmer with PHP (Drupal) and C# in an agile environment that included Jenkins, GitLab CI/CD, Bitbucket Pipelines, Docker, and Kubernetes. Part of this technology stack was hosted on Azure.

I took complete control of Docker applications in PHP, creating new features and resolving issues related to Docker deployments. I also migrated these applications to Kubernetes, developed new pipelines in Jenkins, and implemented new features in C# applications. Additionally, I managed the migration of Windows servers from versions 2008 to 2016 using Chef (a provisioning tool), developing various recipes in Ruby.

### **Transbank S.A - Devops and Manager of environments (1 year)**

During this time, I worked at Transbank. Among my responsibilities were assisting various teams with deployment tasks in a Java environment, which included Linux servers and different enterprise Java servers such as WebLogic and WebSphere.

I helped transition legacy applications to modern pipelines for rapid deployment and resolve many complications between infrastructure and programming teams.

### **Principal Financial Group - Full-stack Developer (1 year 2 months)**

I was working as Full Stack Developer with technologies in java like JSF , EJB , Spring MVC in backend .In the frontend part I worked with angularJS , Backbone, Coffeescript and others.

*I resolved several problems and I implemented new features in one no agile environment in different kinds of JAVA Server.*

### **Others Company experiences and freelance**

I Have had another interesting experiences before with technologies like Xamarin , PHP and C#, with frameworks like Laravel , Symfony and CakePHP, working in bussines like selling and logistics .

I Have had some interesting freelance experience between the years 2000 and 2004 where I was working with technologies like python y django , springboot and java. I made the pipelines en github actions and deploying partially the insfracstructure with terraform in AWS
